

WOMEN IN STEM

We celebrate women in STEM, (Science, Technology, Engineering and Math) both acknowledged and unknown, for their role in the exploration of the world and Universe around us.

It wasn't until I went to college and Sally Ride came to talk—it just opened up that possibility of if she could do it then I could aspire to do it too.”

Cady Coleman
chemist, retired United States Air Force officer, and NASA astronaut

The history of women's contributions to the fields of science, technology, engineering, and math (STEM) is long and varied, but it has also often been underrepresented. This series highlights only a very few of the women who have made important discoveries and have had a crucial impact on STEM fields. Today, women are in every STEM discipline, in every type of job, and represent the widest range of background and experiences.
